Description

[Smoothwall](#) was founded 15 years ago with the aim of providing the education sector the most powerful and accurate web filtering solution. Our commitment to innovation led us to be the first in the market providing content-aware filtering, and the first to offer a genuine solution to the problems created by BYOD. Our objectives are to support creativity in teaching and learning, provide the right access to the right users and simplify the management from a centralized location. Smoothwall is the UK's number one web filter bringing both content-aware filtering and remote (off-site device) filtering to over 7000 UK schools. [Smoothwall](#) provides solutions trusted throughout school networks, and we have developed a deep insight into e-safety and the precautions that should be taken to protect your students, your staff and your school.
